FACT SHEET

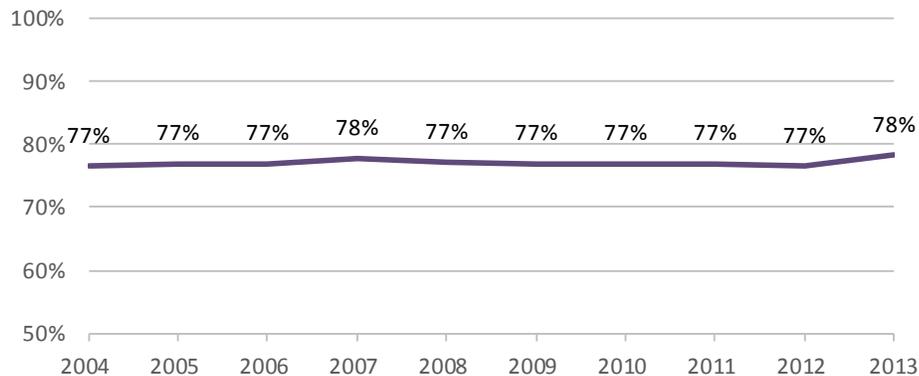

The Wage Gap is Stagnant for Nearly A Decade

September 2014

Women who work full time, year round are typically paid only 78 cents for every dollar paid to their male counterparts. This gap translates into \$10,876 less in median annual earnings, leaving women and their families shortchanged. The wage gap is even more substantial when race and gender are considered together, with African American women typically making only 64 cents, and Hispanic women only 56 cents, for every dollar paid to white, non-Hispanic men. Although enforcement of the Equal Pay Act and other civil rights laws has helped narrow the wage gap over time, closing the remaining gap is crucial for women and their families.

The Wage Gap's Lost Decade

Ratio of Median Earnings of Full-Time, Year-Round Workers

The Gender Wage Gap Persists

- In 2013, women in the United States working full time, year round were typically paid only 78 cents for every dollar paid to men working full time, year round.
- The wage gap has stagnated, remaining statistically unchanged compared to nearly a decade ago.

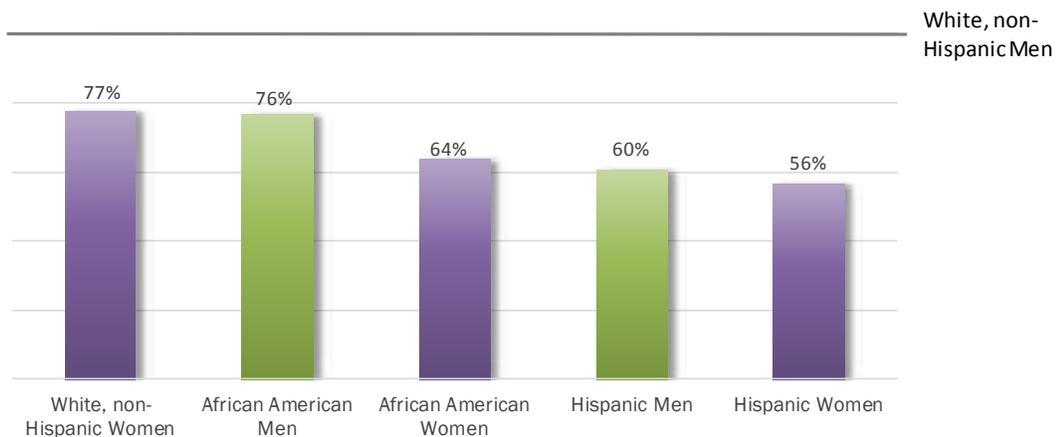

- The wage gap is even more substantial for African American and Hispanic women. In 2013, African American women working full time, year round were typically paid only 64 cents and Hispanic women were paid only 56 cents, for every dollar paid to white, non-Hispanic men who worked full time, year round. This translates into an annual loss of \$19,399 for African American women and \$23,279 for Hispanic women. Closing the wage gap is, therefore, particularly important for African American and Hispanic women, who are already more likely to have lower incomes and to be in poverty than many other groups of women and all groups of men.
- The wage gap persists at all levels of education. In 2013, women in the United States with only high school diplomas working full time, year round were typically paid only 76 cents for every dollar paid to

their male counterparts. Among people with a bachelor's degree or higher, the figure was only 73 cents. In fact, a woman who has received only an associate's degree still is typically paid less than a man who only graduated from high school.

- The wage gap compounds over the course of a woman's lifetime. Women who worked full time, year round would typically lose \$435,049 in a 40-year period due to the wage gap. A woman would have to work more than eleven years longer to make up this gap. A woman working full time, year round who starts, but does not finish, high school would typically lose \$332,704 over a 40-year period compared to a man with the same education level, an enormous amount of money for women who are typically paid \$22,248 a year. A woman would have to work fifteen years longer to make up this gap.

Wage Gap as Compared to White, non-Hispanic Men's Earnings, 2013
